## NATIONAL DOCTORS' DAY

# Minimally Invasive Surgery (Angioplasty) – A Gold Standard Treatment for Individuals with Total Blockage of Heart Blood Vessels

*Angioplasty, a faster and proven solution to avoid open heart/bypass surgeries in total blockage of heart blood vessels*

A 46-year-old male with high blood pressure and diabetes was admitted in our hospital with symptoms of chest pain and breathing difficulty. He is a known smoker and consumes alcohol. Upon performing ECG, 2D-ECHO and coronary angiogram, he was diagnosed to have total heart vessel blocks in two of the four main coronary arteries for which we advised revascularization. Previously, at an outside hospital, he was recommended for bypass surgery as they couldn't perform PCI successfully. Here at Medicover, we reviewed all patient data, including angiography and failed angioplasty procedure to devise a method of percutaneous revascularization to avoid bypass surgery, which we could do successfully by our operator's expertise and technology availability. Our success rate in opening long-standing heart blood vessel blockages is >95%, which is comparable with the best centres in Japan, who are the innovators of these procedures. Around 10-25% patients with heart disease develop complete heart vessel block or chronic total occlusion. Chronic total occlusion (CTO) is the complete (100%) blockage of an artery of the heart for at least three months. Due to fatty deposits and calcium build up along the inner artery walls, the arteries get narrowed and result in blockage of heart blood vessels, which prevents the flow of blood to that part of the heart leading to breathing difficulty and chest pain on exertion. Total heart vessel blocks can be detected only by performing the diagnostic

procedure called the coronary angiography. Prescription medication is used only to control the symptoms associated with CTO, however, medications alone will not help in reopening the blocked vessel. In Coronary Artery Bypass Graft (CABG) surgery, an artery or vein from another area of the body is used to create a detour for blood to flow around the blocked artery/vessel. Historically, bypass surgery was the mainstay treatment option for treating such vessels. However, with advancements in the medical technologies, minimally invasive procedure called CTO angioplasty has become the gold standard treatment for a large section of individuals with total blocked vessels. During an angioplasty, after crossing blockage with a stepwise wiring strategy, a balloon is inserted into the coronary artery and inflated to widen it and improve blood flow. Further, a stent is

placed in order to keep the artery open and supported. In such complex procedures, operator expertise and a success rate of > 90% is pivotal to do procedure. Success rate of our operator at Medicover Hospitals is >95%, which is on par with the international standards at the best Cardiac centers in the World, such as Japan, Europe and United States of America. Medicover is specialized in doing complex angioplasty procedures by avoiding bypass/open-heart surgeries. Medicover cardiology team led by Dr Sharath Reddy, Senior Interventional Cardiologist, Director of Cath lab, Director of CTO & Complex coronary interventions, Director TAVR & Structural Heart Diseases, Medicover Hospitals, India is specialized in performing complex angioplasties, such as CTO and imaging-guided procedures, while avoiding bypass surgeries. He is also an expert at various other heart procedures like transcatheter aortic valve replacement/implantation (TAVR/TAVI).

**ABOUT MEDICOVER HOSPITALS**  
Established in 1995 in response to the growing demand for high-quality healthcare services in Poland, Medicover subsequently expanded to other countries fulfilling similar needs. Today, Medicover's Healthcare Services encompasses 26 hospitals, more than 125 healthcare centers, and 16 fertility clinics spanning Germany, Poland, Turkey, Belarus, Bulgaria, Georgia, Romania, Serbia, Moldova, Ukraine and India and a partner network of more than 3,500 local healthcare service providers. Medicover provides a broad spectrum of healthcare services via an extensive network of ambulatory clinics, hospitals, specialty-care facilities, and laboratories through two divisions – Healthcare Services and Diagnostic Services.

**SBI**  
The banker to every Indian

HOME LOANS @ JUST **6.70%** ONWARDS  
PERFECT HOME LOAN FOR YOUR DREAMS

Celebrating **66<sup>th</sup> BANK DAY**

1<sup>st</sup> July, 2021  
We are happy to celebrate this day with all of our **45 crore+** customers. For us, every customer is important and each one of them is the

“ I ”

in **SBI**

We thank them and all other stakeholders for their unwavering trust in us. On State Bank Day, we rededicate ourselves in the service of the Nation. We are truly humbled and proud to be The Banker to Every Indian.
